No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                  US-09-867-159A-2

A,Molecule type: protein.
A,Residues: 'Z',2-4',Z',6-9 <BAC>
C,Comment: This peptide induces DNA synthesis in immature thymocytes, but not peripheral in a variety of immunoassays.
C,Comment: See PIR:A60957 (sheep) for discussion of another possible N-terminal modifications. C,Superfamily: thymic factor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   C;Accession: A60957

(ANTI-) ANTIALIS SARL.

Trehin Y; Terrasse G, Loria E,

WPI; 2002-750636/81.

Antiallergic compositions containing an anti-histamine, a histamine synthesis inhibitor, and optionally an allergen or nucleic acid coding for the allergen.

Claim 14; Page 11; 32pp; French.

The invention relates to antiallergic compositions containing an anti-histamine, a histamine synthesis inhibitor, and optionally an allergen or isolated nucleic acid molecule that has at least one polynucleotide sequence coding for the allergen, together with a pharmaceutical carrier. The pharmaceutical composition of the invention is useful as a non-specific antiallergic treatment, and also useful in the treatment of allergic hypersensitivity, allergic asthma, allergic rhintis, and allergic and acopical eczema. This sequence represents a peptide of a cysteine protease epitope region relating to the antiallergic

The sequences given in AAR77350-53 are peptides derived from the canonical Haemonchus contortus cysteine proteinase molecule which were used in the design of the primers given in AAQ94240-43. These primers were used in the cloning of cDNA fragments from the cysteine proteinase gene, such as DM.1, DM.2, DM.3, DM.4, DM.4a and DM.5 (see also AAQ94246-51). The amplified fragments may be expressed in a recombinant cell for the production of antigens. These antigens may be used in the preparation of a vaccine against helminth parasites in a human or non-human animal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Protective helminth parasite antigen - used in vaccine directed against parasitic nematodes of mammalian gastro-intestinal tract e.g. Haemonchus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to an antiallergic pharmaceutical composition (I) comprising a pharmaceutical carrier containing an active agent combination of at least two of: an allergen; an antihistramine; and a histramine synthesis inhibitor. (I) is used for treating or preventing allergic hypersensitivity reactions, especially allergic asthma, allergic rhinitis or allergic eczema, in babies, children or adults. The present sequence is a peptide fragment (epitope) of cysteine protease from Dermatophagoides pteronyssinus, which was used as an allergen in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Antiallergic composition, useful for preventing and treating e.g. asthma, rhinitis or eczema, containing at least two of allergen, antihistamine and histamine synthesis inhibitor.

The present invention describes peptide derivatives (I) comprising a dihydropyridine/pyridinium salt type redox moiety for targeting peptides to the retina, a bulky lipophilic function and an amino cold/dipeptide/tripeptide spacer. Also described: (I) the preparation of (I); and (2) intermediate quaternary salts (II). (I) have antidiabetic and ophthalmological activities. (I) can be used in the treatment or prevention of diabetic retinopathy by delivery of peptides with growth factor inhibitory activity (e.g. somatostatin analogues such as octreotide and lanreotide) to the retina by sequential metabolism. It is envisaged that (I) will be useful in the treatment of insulin dependent diabetes mellitus parients for critical periods in diabetic retinopathy disease progression before laser photocoagulation is indicated, preferably for 1-4 month intervals when a patient is experiencing severe con-proliferative diabetic retinopathy or is found to have low risk diabetic retinopathy. The present sequence represents a somatostatin analogue peptide, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Polylinker peptide #3 relating to invention of M. tuberculosis antigens.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             peptide derivatives with redox targetor moiety are useful in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Mycobacterium tuberculosis antigenic polypeptide; immune response; tuberculosis infection; polylinker peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Score 36; DB 2; Length 9; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ਨੇ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes peptide derivatives (I) comprising a dihydropyridine/pyridinium salt type redox moiety for targeting peptides to the retina, a bulky lipophilic function and an amino cot dihydroppride/tripeptide spacer. Also described: (I) the preparation of (I); and (2) intermediate quaternary salts (II). (I) have antidiabetic and ophthalmological activities. (I) can be used in the treatment or prevention of diabetic retinopathy by delivery of peptides with growth factor inhibitory activity (e.g. somatostatin analogues such as octreotide and lanreotide) to the retina by sequential metabolism. It is envisaged that (I) will be useful in the treatment of insulin dependent diabetes mellitus patients for critical periods in diabetic retinopathy disease progression before laser photocoagulation is indicated, preferably for 1-4 month intervals when a patient is experiencing severe con-proliferative diabetic retinopathy or is found to have low risk diabetic retinopathy. The present sequence represents a somatostatin analogue peptide, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö

The present invention relates to fusion proteins of Mycobacterium tuberculosis antigens, and the polynucleotide sequences encoding them. The sequences of the invention are useful in a method for preventing tuberculosis by administering to a subject an amount of the fusion protein or the polynucleotide that encodes the fusion protein. Also disclosed is a pharmaceutical composition comprising the fusion protein or the polynucleotide sequence encoding it. The fusion protein induces an immune response to M. tuberculosis and can be used in the diagnosis, prevention, and treatment of tuberculosis infection. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           dihydropyridine/pyridinium salt type redox moiety; retina; lipophilic; antidiabetic; ophthalmological; diabetic retinopathy; growth factor inhibitory activity; somatostatin; somatostatin analogue; octreotide; lanreotide; sequential metabolism; insulin dependent diabetes mellitus.
                                                                          New fusion proteins of Mycobacterium tuberculosis for diagnosing, preventing or treating tuberculosis infection or in enhancing immune
                                                                                                                                                                                                                                                                                                                                                                                                                                    59.0%; Score 36; DB 7; Length 9; 83.3%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                        The present invention relates to the isolation of polynucleotide sequences encoding Mycobacterium tuberculosis antigenic polypeptides. The polynucleotide sequences of the invention are useful for treating, preventing, and diagnosing M. tuberculosis infection, for producing M. tuberculosis infection, for producing M. tuberculosis infection, for producing M. tuberculosis secretory polypeptides, for producing DNA vaccines, for presence of bacteria in a biological sample, for inducing and/or presence of bacteria in a biological sample, for inducing and/or ABUS5749 tepresent flexible polylinker peptides. Note: The present sequence is given in the Sequence listing but is not mentioned elsewhere in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    M. tuberculosis fusion protein associated flexible polylinker peptide #2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gapa
                                                                                                                                                                                                                           Novel isolated mycobacterial polynucleotide, useful for treating, preventing or diagnosing Mycobacterium tuberculosis infection, for producing Mycobacterium tuberculosis secretory polypeptides and DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Fusion protein; Mycobacterium tuberculosis antigen;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ð
                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to the identification of complementary peptides by analysis of protein and nucleotide sequence databases from higher eukaryotic genomes, excluding human and plants. The specific complementary peptides interact with their relevant target proteins encoded in the eukaryote genome. The peptides may be used as reagents and
                                                          The present invention describes peptide derivatives (I) comprising a dihydropyridine/pyridinium salt type redox moiety for targeting peptides to the retina, a bulky lipophilic function and an amino acid/dipeptide/tripeptide spacer. Also described: (I) the preparation of (I), and (2) intermediate quaternary salts (II). (I) have antidiabetic and ophthalmological activities. (I) can be used in the treatment or prevention of diabetic retinopathy by delivery of peptides with growth factor inhibitory activity (e.g. somatostatin analogues such as corrected and lanreotide) to the retina by sequential metabolism. It is envisaged that (I) will be useful in the treatment of insulin dependent diabetes mellitus patients for critical periods in diabetic retinopathy
                                                                                                                                                                                                         disease progression before laser photocoagulation is indicated, preferably for 1-4 month intervals when a patient is experiencing severe non-proliferative diabetic retinopathy or is found to have low risk diabetic retinopathy. The present sequence represents a somatostatin analogue peptide, which is used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Identifying complementary peptides by analysis of protein and nucleotide sequence databases, useful in drug design.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is a calpain partial peptide. Calpain is a human leukocyte derived calcium dependent cysteine protease, which can be used to screen for compounds that activate or inhibit its proteolytic activity. Calpain DNA can be used to treat or prevent cancer, cerebral appplexy, cerebral infarction, substrachnoid haemorrhage, Alzheimer's disease, myodystrophy, cataracts, ischaemic heart disease, athritis or collagen disease

The present invention discloses new human HCCAl protein, the polymucleotides encoding the polypeptide and the recombinant process to produce the polypeptide. The present invention also discloses the method of applying the medicine composite of the polypeptide in treating liver cancer and other diseases. The present invention also discloses the preparation process of HCCAl protein specific antibody and its application in disgnosing and treating diseases. The present invention also discloses the application of the polynucleotides encoding the new HCCAl protein. The present sequence represents a peptide sequence relating to human HCCAl protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Polylinker peptide #2 relating to invention of M. tuberculosis antigens.
                                                                                                                                                                                                                                                                                                                                                                                       New liver cancer up expressing gene for treating liver cancer and other
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mycobacterium tuberculosis antigenic polypeptide; immune response; tuberculosis infection; polylinker peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      49.2%; Score 30; DB 5; Length 6; 80.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention provides a number of peptide nucleic acids (PNAs) capable of binding to a cell surface receptor, where the oligomer and the peptide are linked by a chemical bond or an amino acid linker. The oligomer may have a polyamide, polythicamide, polysulfinamide or polysulfonamide backbone. The PNAs of the invention can be used in therapy, including the treatment of infections, cancer, autoimmune diseases, renal failure, endocrinological disorders, acromegaly, neurological diseases and sickle cell anaemia. The present sequence is an example of a peptide for use in a PNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Novel conjugate, useful for killing pathogenic organisms and for inhibiting gene expression, comprising a peptide nucleic acid oligomer conjugated to ligand capable of binding to a cell surface receptor via chemical bond or linker.
                                                                                                                                                             Peptide nucleic acid; PNA; therapy; infection; cancer; restenosis; asthma; autoimmune disorder; endocrinological disorder; renal failure; neurological disease; acromegaly; sickle cell anaemia;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    .;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                       The present invention relates to the isolation of polymucleotide sequences encoding Mycobacterium tuberculosis antigenic polypeptides. The polymucleotide sequences of the invention are useful for treating, preventing, and diagnosing M tuberculosis infection, for producing M tuberculosis secretory polypeptides, for producing DNA vaccines, for diagnostic purposes, as molecular probes or primers to detect the presence of bacteria in a biological sample, for inducing and/or enhancing immune responses to M. tuberculosis, and in gene therapy. BMIS5749-ABUS5754 represent flexible polylinker peptides. Note: The present sequence is given in the Sequence listing but is not mentioned elsewhere in the specification
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      M. tuberculosis fusion protein associated flexible polylinker peptide #1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New fusion proteins of Mycobacterium tuberculosis for diagnosing, preventing or treating tuberculosis infection or in enhancing immune responses in M. tuberculosis.
                                                                        Novel isolated mycobacterial polynucleotide, useful for treating, preventing or diagnosing Mycobacterium tuberculosis infection, for producing Mycobacterium tuberculosis secretory polypeptides and DNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Campos-Neto
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Score 30; DB 6; Length 6;

                                                  The present invention relates to fusion proteins of Mycobacterium tuberculosis antigens, and the polynuclectide sequences encoding them. The sequences of the invention are useful in a method for preventing tuberculosis by administering to a subject an amount of the fusion protein or the polynuclectide that encodes the fusion protein. Also disclosed is a pharmaceutical composition comprising the fusion protein for the polynuclectide sequence encoding it. The fusion protein induces an immune response to M. tuberculosis and can be used in the diagnosis, prevention, and treatment of tuberculosis infection. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            /label= OTHER

Publication No. US20030211981A1

GENERAL INFORMATION:

APPLICANT: BODOR, Nicholas Stephen

APPLICANT: BARTOLOMEO, Maria

TITLE OF INVENTION: COMPOUNDS AND METHOD FOR THE PREVENTION AND TREATMENT

TITLE OF INVENTION: OF DIABETIC RETINOPATHY

TITLE OF INVENTION: 028724-109

CURRENT APPLICATION NUMBER: US/10/175,833

CURRENT PILING DATE: 1998-09-0.1

PRIOR FILING DATE: 1998-09-0.1

PRIOR FILING DATE: 1997-09-10

NUMBER OF SEQ ID NOS: 65

SOFTWARE: Patentin Ver. 2.0

FEATURE:
NAME/KEY: ENDING
LOCATION: (7)
OTHER INFORMATION: Amino acid 7 is attached by a hydroxide bond.
NAME/KEY: DISULFID
LOCATION: (3)...(6)
OTHER INFORMATION: Cysteine residues at positions 3 and 6 are
OTHER INFORMATION: attached by a non-peptidal disulfide bond.
NAME/KEY: BINDING
LOCATION: (7)
OCHER INFORMATION: Amino acid 7 is attached by a hydroxide bond.
NAME/KEY: DISCLEIDE
LOCATION: (3)...(6)
OTHER INFORMATION: Cysteine residues at positions 3 and 6 are
OTHER INFORMATION: attached by a non-peptidal disulfide bond.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 62, Application US/09144991B

Sequence 62, Application US/09144991B

Patent No. 644033

GENERAL INFORMATION:

APPLICANT: BODOR, Nicholas Stephen

APPLICANT: BARTOLOMEO, Maria

TITLE OF INVENTION: COMPOUNDS AND METHOD FOR THE PREVENTION AND TREATMENT

TITLE OF INVENTION: OF DIABETIC RETINOPATHY

FILE REFERENCE: 0.28724-109

CURRENT APPLICATION NUMBER: US/09/144,991B

CURRENT FILING DATE: 1998-09-01

PRIOR FILING DATE: 1997-09-10

NUMBER OF SEQ ID NOS: 65

SOFTWARE: Patentin Ver. 2.0

LENGTH: 7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
